Project Engineers (PM)

Description

Overview

We are seeking a Senior Project Engineer to join our client in Saudi Arabia.

Your primary role will be to develop methods for guidance, control and corrective action to ensure a safe operable and economic design within the framework of the project's budget, material requirements, specifications and schedule.

You should be an expert in one or more disciplines that directly affect project performance, including but not limited to planning and scheduling, project execution, estimation, cost engineering, geomatics, value engineering, and other value improvement practices.

Key Responsibilities

As the successful candidate you will be required to perform the following:

Provide expert advice and guidance in project planning, project execution, and/or project control.

Assist in resolving project management problems related to your area of expertise, including project planning deficiencies, project quality defects (in engineering, procurement, or construction), schedule slippages, and potential cost over runs.

Work closely with project engineers and other project professionals to provide work direction and guidance.

Formulate and implement strategies to improve project planning, cost, schedule, and/or quality.

Evaluate existing tools and methodologies in your area of expertise and make recommendations on their implementation at the Company.

Lead internal or external problem-solving teams as directed by management.

Conduct training courses in your area of expertise.

Train and mentor developing engineers and other project management professionals.

Participate in the development of standards, guidelines, instructions, policies and procedures on an as-required basis.

Participate in the review and evaluation of the capabilities of E&C contractors, suppliers, and project management related service providers.
